For immediate release September 17, 2009

Qualcraft Industries (a division of Guardian Fall Protection) forms an alliance with Basemate Ladder Leveling Systems Inc. to distribute the Basemate Ladder Leveler into the US Markets.

The Base Mate Professional Ladder Leveler is a “revolutionary” solution to unstable and unsafe ladders for both do-it-yourselfers and professionals. The Basemate is an ingenious arc of hardened steel that cuts the risk of falls by allowing ladders to remain stable on uneven ground.

Opposing locks on each side of the arc replace the feet of a standard ladder. As the locks are released, the arc slides over until its rubber treads are firmly on the ground while the ladder stays plumb.

It looks easier to use than traditional ladder levelers. To see just how easy, watch the video available at the Qualcraft website www.qualcraft.com or Guardian Fall Protection website www.guardianfall.com . You lean your ladder, tap-release the lock with your foot, and start climbing.

Some Specs & Features:

- wider base which gives added support / stability to extension ladders
- Exceeds Grade 1 and to Type 1A ladder requirements by 20%
- weight tested to 1,200 pounds
- made of hardened steel
- patented triple action locking system with one foot operation (patented design)
- installation to most fiberglass, aluminum and wood extension ladders (12” to 20” rung width)
- adds less than 12lbs to the base of the ladder

Note: The system was originally developed in 2001 by home improvement contractor Martin Dennis (Surrey’s Precision Gutters). It received the “most innovative product” award at the Canadian Hardware and Building Materials Show the same

year but hasn't been professionally marketed until recently. Just goes to show you that brilliant ideas do not go out of style.

About Guardian Fall Protection & Qualcraft Industries

Kent, Washington's Guardian Fall Protection has continued its unprecedented growth with acquisitions of Qual-Craft Industries and FramePro Products. In addition to anchor points, body harnesses, and connections for PFP systems, this powerhouse trio also touts the most innovative temporary guardrail, access and scaffolding solutions in the industry.

Established in 1951, Qual-Craft Industries is a national construction Products Company located in Mansfield, Massachusetts. Qual-Craft designs, engineers and manufactures a broad range of quality construction products, including scaffolding and staging systems, roofing and shingling tools, construction accessories, ladder accessories and fall protection products. The company's products sold primarily through retail outlets and contractor supply outlets across the USA.
